PANVI Serve the Services of Water Treatment Plant, Design, Erection, Establishment, Issue Rectification, Performance Enhancement, O&M, STP, ETP, CETP MEE Plant, Pre-Treatment Plant, RO Plant, Chemical Supply, Media Replacement, Spares Supply & Services, KSPCB Related Issues, Energy Savings, Sludge Reduction, Improve Water Quality.

One Point Solution for all kind of Water Treatment Plant

Our Vision:

We manage our organization and water resources to meet evolving regulatory requirements, water supply needs and customer expectations in the future.
We aim to be globally recognised as first choice for water, waste water, solid waste & for organic waste services in the following communities.

Our Mission:

Water Technologies mission is to consistently provide a comprehensive range of high quality, cost effective and sustainable water treatment products and services to our valued customers, in order to satisfy their specific water service delivery needs and objectives.

Manufacturer & Supplier

Our engineers, from fabrication to installation of all types of water & waste water treatment plants are expert to satisfy your requirement.

Consultant

We are your partner in all questions relating to turnkey projects, Performance study & trouble shooting. Based upon your requirement, we can help to find the best for you.

Operation&Maintenance (O&M)

PANVI offers one-stop solution for operation and maintenance of utility equipment for various industries. Our expert team ensures utilities like power, steam, compressed air, water etc. are available 24x7 as per plant requirement. Our proprietary O&M processes backed with strong engineering expertise help us deliver industry leading equipment reliability and availability.

Our Products

EFFLUENT TREATMENT PLANTS (ETP)

Effluent Treatment Plant is a facility in which a combination of various processes (e.g., physical, chemical and biological) are used to treat industrial wastewater and remove pollutants.

STP TREATMENT PLANT (STP)

Sewage is the waste generated from residential, institutional, commercial and industrial establishments. STP plant treats the sewage to make it fit for safe disposal, agricultural use or domestic use in toilets etc.

RO System (Reverse Osmosis)

Reverse osmosis (RO) is a water purification process that uses a partially permeable membrane to separate ions, unwanted molecules and larger particles from drinking water.

MEE PLANT (Multiple Effective Evaporator)

It Is used to evaporate the residue water from MEE concentrated liquid and generate dry salt for dispose. MEE concentrated liquid have large amount of water content which is not possible to dispose so salt dryer is used after MEE to reduce water content from MEE concentrated liquid.

ZLD PLANT (Zero Liquid Discharge)

It is used to evaporate the residue water from MEE concentrated liquid and generate dry salt for dispose. MEE concentrated liquid have large amount of water content which is not possible to dispose so salt dryer is used after MEE to reduce water content from MEE concentrated liquid.
